

# Pupils' eye-opening, ear-tickling environmentalist day

A young environmentalist carries the weight of the world on his shoulders.

**CHILDREN** learned how to be eco-friendly on Saturday at Harrow's Climate Change Day.

The activity day at Harrow Museum in Headstone Manor, Pinner View, was aimed at young people aged between seven and 14 and highlighted the problems of global warming.

The main attraction was the Eco Show, an interactive workshop where the youngsters debated world environmental issues such as energy use, oil consumption and how they can live a greener way of life.

Music and theatre were incorporated into the workshop to make it more enjoyable.

Natalie Morgans, Harrow Council's energy team spokeswoman, said: "The event went really well and all the children engaged with all the activities while also learning about climate change."

Susan Hall, responsible for environmental services, said: "It is the next generation that will hopefully usher in a complete sea-change in attitudes to recycling and the environment. This type of event helps raise awareness of these issues at an impressionable age which they will hopefully carry into adulthood."

The £3,000 event, was funded by DEFRA and ZED Homes, an eco-friendly developer which is building low carbon homes in Stanley Road, Harrow.

Since 1996, Harrow homeowners have reduced household emissions by more than 15 per cent.

Call Harrow Museum about its events on 020 8863 6720.

Harrow youngsters play musical instruments from around the world.
